UC Southern Regional Library Facility 2007/08 Annual Report

SIGNIFICANT EVENTS AND ACCOMPLISHMENTS

2007/08

- New Deposits: the SRLF received 285,684 new items, including 16,000 additional volumes from UCSD, 33,259 items for the UCL Shared Print Collection and 26,775 pre-processed items from UCLA Film & Television Archive.
- New items added to the collections in 2007/08 totaled 266,128.

UCI Libraries	15590	6%
UCLA Libraries	128893	48%
UCLA Film & Television Archive	26775	10%
UCR Libraries	16330	6%
UCSD Libraries	34047	13%
UCSB Libraries	12484	5%
UCL Shared Print Collection	21445	8%
UCL JSTOR Archive	10564	4%

Incoming deposits continue to include increasing numbers of serials titles. With 32% of all new deposits, the SRLF processing section has struggled to keep pace with incoming serial titles (up from 25% three years ago). This challenge became greater with the loss of a serials processor

during the winter quarter. To assist with this workload, .75FTE was temporarily reassigned from the JSTOR Project to SRLF Processing during the spring quarter.

- Paging requests totaled 113,730, an increase of 4% from the previous year. The SRLF filled 3,855 document delivery requests electronically, either direct to the patron or to the requesting libraries via the Web.
- ILL requests from non-UC libraries continue to increase with 11,980 requests received in 2007/08, representing more than 10% of the SRLF's ILL workload. Staff has been challenged to keep pace with this workload, and .5 career FTE has been added to support this effort. Staff training to develop skills and greater familiarity with the OCLC and VDX tools has also improved performance and productivity.
- SRLF Preservation Imaging staff was increased by .5 career FTE, enabling this unit to immediately increase production in preservation microfilming. One staff member was reassigned to the evening shift, enabling the team to increase scanning capacity on the Digibook scanner by 50%. The production numbers for the year include:

Microfilm images (frames)	55,829
Microfilm reels produced	789
Digital scanning images	47,359

Preservation Imaging Services relocated to SRLF Room 175 following the move of UCLA Library's Conservation Lab to the Kinross Building in November 2007. The laboratory space was modified to better serve the needs of microfilming and digital imaging, including electrical, plumbing, and flooring upgrades. The new room brings together in one contiguous space all preservation scanning, microfilming, photography, and quality control work. Preservation Imaging staff moved into the new space in May 2008. Film processing and duplication work continues to be provided on-site in Room A93.

In addition to the improved work space, photographic services were expanded with the installation of the photography and lighting studio in Room 175. Digital camera, light equipment, backdrops, strobe power packs, and Macintosh workstations were installed and configured late in the year. The addition of a fully-operational photography studio compliments the range of services provided

for digital imaging projects, including the capture of artifacts and objects along with the content of print materials.

- SRLF's Library Move Services completed the return of the Clark Library collections. The collections were moved back to the Clark Library gradually throughout the year, with the final delivery completed in May 2008. The collections had been stored at SRLF while renovation and installation of new HVAC and fire suppression systems were completed at Clark Library. Hundreds of boxes of rare books, folios, and microfilm were safely transported and delivered back to the Clark Library shelves without damage to any contents.
- Technology and network support activities during the year included the successful installation of Office 2007 and Internet Explorer 7 on all staff workstations, with training sessions (live and podcast) provided to all staff. To support the SRLF Web Developers and Preservation Imaging staff, the Adobe Creative Suite application was installed and configured. In addition, two Mac Pro workstations and a MacBook Pro were installed and configured during Spring quarter. These are the first Macs in the SRLF network and many hours of preparation, research and training were committed to this effort. Using VMWare Fusion with the Unity integration feature, the Macs seamlessly integrate Windows apps with the MacOS, supporting both MacOS 10.5 and Windows XP.

Additional IT support was provided during the installation and upgrade of the SRLF video security system. The new system uses Windows XP computers to control cameras, and provides much improved digital recording and archiving of images. Also new this year was purchase of the Ultra Mobile PC (UMPA) equipped with a USB barcode scanner that allows staff to connect via wireless network or Cat5 network access in remote areas of the stacks. UMPC applications enable staff to collect data such as item barcodes and title/collection names and then download the data to workstations. Long hours of tedious labor are significantly reduced by using this new device.

Work on the much needed Public Website redesign is 50% completed. The content has been recoded into XHTML compliant pages (required for the redesign), and content, graphics, and photos will be updated in Fall 2008.

JSTOR Phase 2 Part 1, with 274 new titles and circa five million pages of content, occupied team members throughout the year. Titles began arriving from UC campuses in July 2007, and by the end of June 2008 4,676,067 million pages had been validated (92% complete). Together with all the Phase 1 titles, the JSTOR Team has validated a grand total of **18,742,865 pages** and compiled an archive of 33,558 bound volumes. The remaining 8% of content yet to be validated in Phase 2

Part 1 represents UC volumes not yet received, some issues that were rejected due to missing or heavily damaged pages, and includes the short list of titles that are not available within the UC libraries. Phase 2 Part 2 work has already begun, with 311 additional titles to be added and 5.6 million paged to be validated.

The JSTOR Project successfully passed the May 2008 audit with a score of 99.95% accuracy. This is a truly outstanding accomplishment.

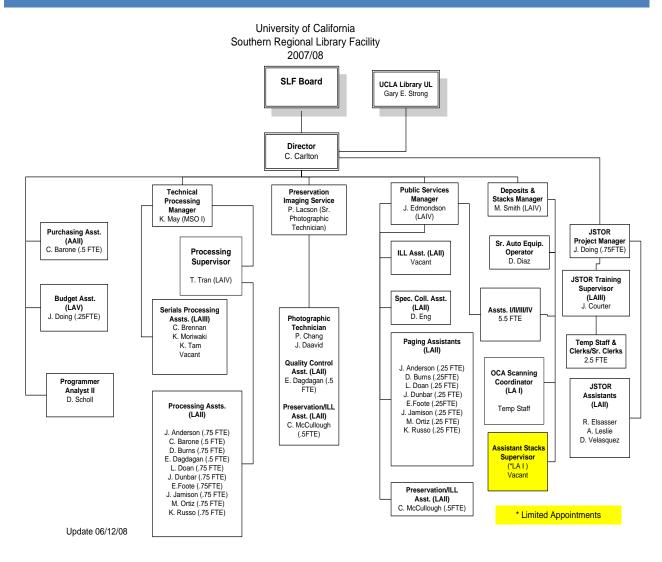

Open Content Alliance (OCA), the mass-digitization project targeting English language monograph titles with pre-1923 publication dates (i.e. in the public domain), continued uninterrupted in 2007/08. By the end of June 2008, circa 75,000 volumes from the SRLF and UCLA Libraries had been scanned and are accessible at the Internet Archive website. An additional 34,000 volumes had been pulled for scanning but were rejected because of 1) tight margins, 2) foldouts or too large and, 3) brittle paper. Records of the rejected items are being retained, with the hope of going back later and scanning these items using different vendors or different scanning equipment. OCA staff is now recalling volumes with foldouts, and these are being scanned using a special workstation that can accommodate the large size of the foldouts.

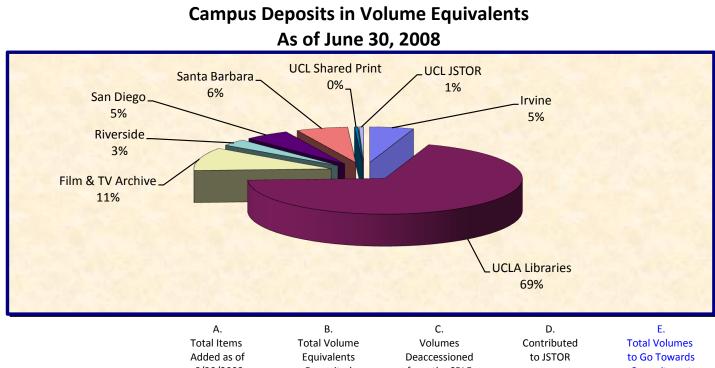

GOALS AND STRATEGIES FOR 2008/09

Transform the Collection by continuing to build shared collections, by accurately describing the SRLF holdings in the online catalogs, by expanding preservation reformatting services including mass digitization, and by providing excellent management of the database systems for collection inventory control and report capabilities. Ensure that annual deposits from the UC campuses and the incoming Shared Print collections are scheduled for transport in accordance with available staff resources at the campus and at the SRLF, striving for balanced workflows throughout the year.

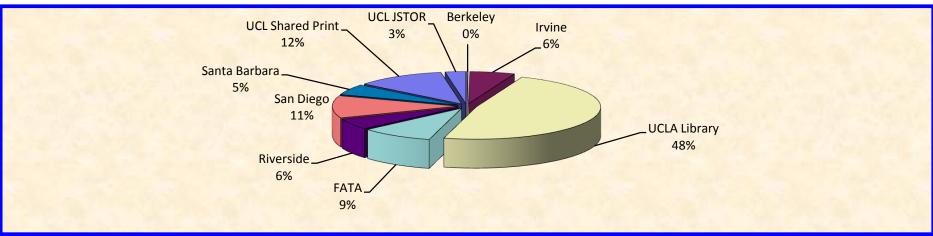

- Make Specialized Collections Accessible through digitization projects. Explore options and solutions for preserving and servicing the newsprint collection, identifying brittle or damaged titles unique to UCLA/SRLF as the top priority. Expand digitization services for special collections, including microfilm-to-digital reformatting. Provide delivery and access to shared collections while minimizing risk of exposure to loss or damage, relying more on digital copies and desktop document delivery. And fully process and inventory the preservation microfilm collections (masters and print negatives) once cataloging policies and processing procedures are finalized.
- Enrich Services by providing the best possible environmental controls and preservation of print and non-print collections that the SRLF's HVAC systems can provide. Maximize services and storage capacity for all types of deposits, including projects to reorganize and relocate map collections for greater efficiency, and to re-occupy vacated shelf space that resulted from previous deaccession projects. Also expand quality control measures that are vital to ensuring access services by producing new web-based report applications or enhancing existing applications for SRLF Paging, OCA inventory database, JSTOR, Voyager reports, and the FATA off-line circulation database. Commit sufficient staff resources to ensure 24 hour turnaround time for all UC requests, and 48 hour turnaround time for the non-UC ILL requests. Promote the preservation imaging and photographic services to the UC community by expanding presence on the SRLF website. Enhance local emergency preparedness and recovery response plans by coordinating the SRLF efforts with UCLA and UC wide programs. Take advantage of training opportunities for staff and online resources to further expand and update the SRLF Emergency Response Plan.
- Enhance Learning Spaces with the redesign and update of the SRLF internet and intranet sites. On the public website, update content and expand the site to include new services that are offered to the UC community and to non-UC clients. Update the intranet site to ensure its critical role as a communications tool and resource for policy documents, procedures, staff training, and database management reports.
